

1. GRAPE SETTINGS

Grape stores internal settings in the table `grape.setting`. The following functions can be used to read and manipulate these settings:

1. **`grape.set_value (name TEXT, value TEXT)`** - sets the value of setting **name** to **value**
2. **`grape.get_value (name TEXT, default_value TEXT)`** - returns the value of the setting **name**, or if it does not exist returns **default_value**
3. **`grape.setting (name TEXT, default_value TEXT)`** - alias for **`grape.get_value (name TEXT, default_value TEXT)`**

1.1 Known Grape settings

NAME	DESCRIPTION	DEFAULT VALUE
hash_passwords	Indicate whether passwords in grape.user is hashed	false
allow_default_paths	If a path is not found and this setting is true, access will be granted	false
grape_version	Current Grape version
