# 1. GRAPE DATA IMPORT

*Introduced in Grape 0.0.9* Grape provides a set of API calls to upload data files for further processing. The files are usually Microsoft Excel (XLSX and XLS are supported).

## 1.1 Processing functions

Uploaded files can be registered against a pre-defined processing function. These functions must:

1.     Return a JSON object

2.     Accept one parameter, a JSON object. The following fields will always be available: data_import_id and data_import_row_id

API calls: POST /grape/data_upload
